*To calculate the Sharpe Ratio and other key ratios we use the average 1 month CHF Libor rate over the respective time horizon as proxy for the risk-free rate. All numbers are based on daily NAV calculations and we annualize by assuming 253 trading days. The Shortfall Probability measures the probability of the fund return to be smaller than the risk-free rate. The Sortino, Omega, and Upside Potential ratios are investment ratios based on lower partial moments. The Sortino ratio is an adjusted Sharpe ratio for which the volatility generated by negative returns (semi-volatility) is taken into account. The Omega Ratio is a probability weighted ratio of gains to losses relative to the risk-free rate. The Upside Potential Ratio is calculated as the ratio between the expected upside and semi-volatility.¹

Evolution of NAV and Distribution of Daily Returns²

² For the daily return distribution, we plot the histogram together with a non-parametric density estimator based on Gaussian kernels.

Risk Exposure

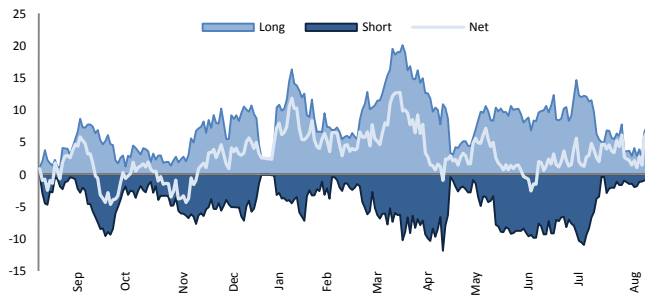

Our risk allocation for the different strategies within Riverplus is based on the maximum loss principle. In contrast to the commonly used Value-at-Risk, Maximum Loss is a coherent risk measure. As an overall acceptable risk exposure on the fund level, we fix a monthly maximum loss of 5% at the 95% confidence bound.

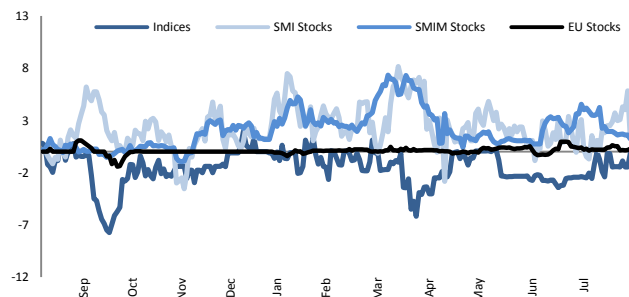

Delta Exposure

The figures below show our Delta exposures. On the right, we plot our long and short Delta positions as well as the resulting net Delta position, expressed in millions of CHF. The left figure illustrates the Delta exposures for our index positions and for the positions in SMI and SMIM stocks.

One-Year Trailing Delta Exposure (million CHF)

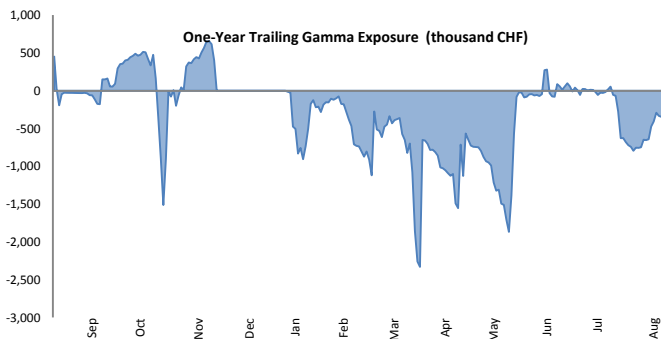

One-Year-Trailing Delta Exposure (Indices, SMIM and SMI Stocks, million CHF)

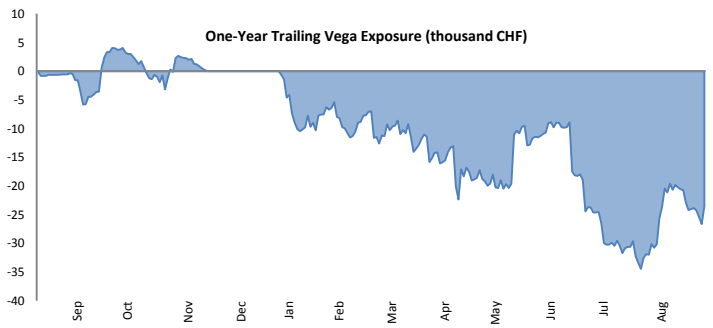

Gamma and Vega Exposure

A large part of the risk capital is allocated to active option-based strategies. Therefore, Gamma and Vega exposures play a prominent role in our risk management and need to be monitored carefully. The figures below plot the daily net Gamma and Vega exposures since inception.

One-Year Trailing Gamma Exposure (thousand CHF)

One-Year Trailing Vega Exposure (thousand CHF)
